Summary

I am deeply passionate about leveraging technology and tools that enhance people's lives. My approach focuses on delivering incremental value through continuous deployment, always aligning with the security requirements and expectations of the product and clients. I believe in bringing both the benefits and potential challenges of any implementation to the forefront, ensuring the team is fully informed and prepared to make the best decisions.

What can you expect from me? I bring a combination of proactivity, creativity, flexibility, and dedication to every project. I value empathy, cooperation, and non-violent communication, and I am committed to continuously improving both my character and my technical knowledge.

My typical day involves working closely and collaboratively with Product Owners, Project Managers, and engineering teams to develop high-performing solutions. I foster open communication and teamwork across all parts of the organization, including internal and external stakeholders, to ensure seamless integration and alignment with broader project goals.

Work Experience

DataHubz | Technical Lead

June 2025 - Present | Colorado, United States

As Technical Lead, I drive product and technical decisions across the DataHubz ecosystem — six interconnected products spanning architecture, implementation, Page 1 of 6 infrastructure, and security:

- Hubz Auth: centralized SSO (Keycloak + Kong) with passkeys/FIDO2, social login, OAuth2 PKCE, and a reusable SDK used by every product.
- VCE Studio: privacy-preserving desktop security scanner (Wails, Go + React) running Semgrep, Gitleaks, Trivy, Trufflehog, tfsec, kube-linter, Grype, OSV — with governance scoring and tamper-proof evidence anchored on Horizen via VCE.
- Hubz: AI-powered compliance platform (GDPR, ISO 27001, CMMC) with multi-tenant docs, framework tracking, and streaming chat backed by multimodal LLM orchestration (Mistral, Ollama, Hugging Face custom models). Also built Hubz Erbon API, a hospitality integration with partner ERP Erbon: OAuth lifecycle, scheduled extraction of hotels/rooms/bookings, dedup, and recovery via Sidekiq.
- Hubz Platform: TypeScript/Next.js rewrite of Hubz — a browser-native Google Workspace/M365-style compliance suite with twelve integrated apps (Dashboard, Vault, Documents, Spreadsheets, Presentations, Secrets, Messages, Projects, Comply, Evidence, Studio, Users) tied into roadmap frameworks.
- GuardGit: compliance-native Git platform on a custom substrate, integrated with CSE Registry (1,143+ signals, 12 frameworks), with posture scoring, evidence bundles, gap analysis, and Vericode — blockchain attestation via Horizen + Groth16 ZK proofs on zkVerify. Also contributed to CSE Registry.
- Relay: internal compliance-first ticketing platform with SLA enforcement, immutable audit trails, and RBAC.

Alongside infra team, rolled out observability, defined coding standards, and owned CI/CD on Kubernetes/Helm.

- **TypeScript, , React, Node, Rails, Go, Wails, PostgreSQL ,Redis, BullMQ, Sidekiq, Keycloak, Kong, Mistral/Ollama/Hugging Face, AWS, Docker, Kubernetes, Helm, Grafana, Playwright, zkVerify, Horizen, Github Actions and more.**

Retail Consult | Technical Lead

February 2025 - July 2025 | Porto, Portugal

Hired as a Senior Backend Developer (Python) and, within the first month, recognized for technical contribution and team collaboration, I was promoted to technical lead and owned the platform's technical direction end-to-end.

We were building Katalist, a new company spun out of Retail Consult, creating an integration and intelligent processing platform for the retail industry. The product ingests data from multiple partner companies and transforms it into a common data format proposed by Katalist, through a pipeline of composable processing and extraction steps orchestrated with Azure Event Grid and

Azure Functions.

The Python backend had no consistent structure — I introduced multiple architecture and design patterns, defined conventions and quality gates, and led the codebase standardization effort across the platform. I also drove a full rewrite of the frontend in React for investor expectations, and designed and shipped an AI-powered dynamic extractor/sanitizer step in the pipeline that generates extraction code on the fly so end clients can onboard without engineering work on their side.

Beyond the code, I owned the team's process and tooling: structuring tasks, sprints, and workflows in Azure DevOps Boards and training the team on it, and designing a large portion of the new product's UI screens in Figma before handoff to development.

My day-to-day combined hands-on engineering, architecture decisions, mentoring, and acting as the technical voice in conversations with leadership and investors — keeping the platform aligned with both engineering principles and the business vision behind Katalist.

- **Python, Azure Functions, Azure Event Grid, React, TypeScript, Node.js, Azure DevOps Boards, AI-powered code generation, REST APIs, Figma, Git, CI/CD and more.**
-

Algemetric | Software Engineer

November 2022 – September 2024 | Colorado Springs, Colorado, United States

I work as part of a multidisciplinary team, where I often take the lead on integration efforts or projects, either independently or with rotating teams of 2-3 members, depending on the feature that needs to be implemented. My day-to-day responsibilities typically include technical discovery, architecture design, documentation, implementation, and infrastructure management.

I specialize in developing integration tools (such as Google Ads, Facebook Ads, databases, files, scripts, API integrations) that enable the synchronization of data from various sources into our core product, which is a database utilizing Multi-Party Computation.

Additionally, contributed significantly to the development of an internal insights tool that consumes data from our Multi-Party Computation database. I was responsible for building much of the tool's core functionality, including authentication, security layers, chart and dashboard structures, and overall operation.

- **Ruby on Rails, React, Golang, python, Sagemaker, Docker, Nodejs, K8S, Google Console, Azure, microservices, Hugging Face, AWS, Docker, Kubernetes, Helm, Grafana, Sidekiq, Github Actions and more.**
-

GacTec | Co-Founder

June 2020 – December 2023 | Rio de Janeiro, Brazil

Here I and my Co-Founder Rafael Ribeiro started a company with the intention to help other small companies with all kinds of IT problems. I was capable of managing a team of 8 people (engineers and designers) during the entire project life cycle. Design and build full ecosystem architectures and teach people about basic development and implement agile workflow in our client's company.

Hurb | Software Engineer

September 2022 – November 2022

Short-term engagement supporting engineering delivery and product improvements during a focused project period.

Afterverse | Software Engineer

September 2021 – June 2022 | São Paulo, Brazil

I worked on the Platforms team, which is responsible for creating and maintaining services used by the company's games and management tools.

In this role, I took on the responsibility of designing and developing projects that significantly contributed to the company's success. These projects included improving game health reporting, managing item inventories, streamlining content releases, and developing resource management tools. Implemented best practices for Git, and enhanced the performance of existing systems. Additionally,

I also led the restructuring of the onboarding flow and was directly responsible for providing guidance and support to junior developers. I played a key role in interviewing new hires and mentoring them, ensuring their successful integration and growth within the team.

- **Kotlin, Postgresql, DynamoDB, Vue, Vuetify, AWS, Gradle, Jib, Docker, Github Actions and more.**
-

Hurb | Software Engineer

November 2019 – September 2021 | Rio de Janeiro e Região, Brasil

I work on the Payment team, where we are responsible for managing all B2C and B2B transactions. This includes integrating with various payment gateways, overseeing checkout processes, managing orders and supplier relationships, handling installment flows and refunds, implementing anti-fraud measures, and ensuring a thorough understanding of the operations across all involved sectors.

In this role, I have led numerous projects that required collaboration with nearly every department within the company, as well as communication with external partners.

I also served as the technical representative for the backend team on the company's internal backend committee and temporarily represented the frontend team until a dedicated frontend

specialist was hired.

Additionally, I earned the trust of leadership to represent the team in various capacities, such as evaluating new candidates, attending alignment meetings, and assisting other teams in overcoming development challenges with specific features or tools developed by third parties.

I was also responsible for being the Development Sector Onboarding Instructor, where I introduced new employees to the department, answered their questions, and often took on the role of an "Angel," helping new hires integrate with other team members.

- **Nodejs, Golang, Python, Ruby on Rails, PHP, microservices, docker, payment integrations, Mysql, Postgresql, Redis and more.**

Estante Virtual | Software Developer

December 2017 - November 2019 | Rio de Janeiro e Região, Brasil

Developed a range of microservices solutions tailored for sellers and buyers within the book marketplace ecosystem. This involved integrating with various external companies for payment processing and logistics. Additionally, I worked as a data visualizer, transforming complex data into actionable insights for all relevant stakeholders. I also fostered strong relationships across different company sectors, which facilitated a better understanding of their challenges and contributed to enhancing workflow efficiency and speed within the engineering team.

- **Ruby on Rails, Perl, Node, Python, Vue, React, Mysql, Postgresql, Redis, HTML, CSS, AWS, S3, Docker, Lambda, Microservices and more.**

Estante Virtual | Intern

June 2016 - December 2017 | Rio de Janeiro e Região, Brasil

Assisted the team with development tasks, learning core engineering practices while contributing to ongoing projects.

Education

Centro Universitário UniCarioca

Bacharelado, Ciência da Computação

2015 - 2019

Hard Skills

- Ruby on Rails
- Golang
- Python
- JavaScript / TypeScript
- Node.js
- React
- Vuejs
- AWS
- Docker
- Kubernetes
- CI/CD
- PostgreSQL
- Agile / Scrum
- REST APIs

Soft Skills

- Technical Leadership
- People Management
- Mentorship
- Stakeholder Communication
- Technical Decision Making
